GREYHOUND PUP COMPLETES FIRST SIDECAR TEST AS GREYHOUNDLSR TAKES ANOTHER STEP TOWARDS 400MPH

GreyhoundLSR has completed the first 'Pup' sidecar test of its development at Dalton Barracks, gathering valuable data to support its motorcycle land speed record challenge.

WANTAGE, UK - 26 OCTOBER 2026

The airfield test provided an opportunity to develop and assess systems ahead of the full-sized GreyhoundLSR motorcycle's own track testing. With the project working towards bringing the motorcycle land speed record back to Britain and ultimately exceeding 400mph, the Greyhound Pup offers an important opportunity to learn through practical testing.

A key focus of the day was working with Ben and Toby from VBOX Motorsport to set up a brand-new light-based deviation system and gather data to inform the next stages of development. Their hands-on support helped the team make the most of the test, turning time on the airfield into valuable information for the wider land speed record programme.

> **"This first test has given us valuable data to support development of the land speed record bike. The VBOX system performed exceptionally well and has already highlighted the need to make changes to our stroke sensors."**
>
> **MARK TAYLOR**
> **Technical Director, GreyhoundLSR**

> **"It was great to get behind the controls of the Greyhound Pup for its first test. Being able to contribute as a rider and help the team learn more is really rewarding. A huge thanks to Sparkey and everyone involved in making the day happen."**
>
> **ROB ATKINSON**
> **Rider, RAF Sidecar Team**

GreyhoundLSR extends its sincere thanks to Corrin and everybody at RAF Motorsports for their help with the test and for coordinating the arrangements that enabled the team to run on the airfield at Dalton Barracks. The team also thanks Rob and Sparkey for their time, expertise and support, and Ben and Toby from VBOX Motorsport for their outstanding work setting up the new system and helping gather the data needed to take another step forward.

The findings from this first Greyhound Pup sidecar test will help inform continued development as GreyhoundLSR prepares to bring its record challenger onto the track.

ABOUT GREYHOUNDLSR

GreyhoundLSR is a British engineering team developing a purpose-built motorcycle with the ambition to bring the land speed record title back to Britain and exceed 400mph. Our target is to make a record attempt in Hakskeen Pan, South Africa, in late 2027 with our rider, Peter Hickman.
